

Ready to Recharge Your Batteries?

Try our heated mug with a built-in wireless phone charger

Relax and Charging

Now you can relax with a warm coffee and charge your smartphone using one powerful device. Ideal Memory's mug warmer with wireless charger helps you recharge your batteries (literally and figuratively) every morning.

Temperature-Controlled Ceramic Mug

Keep coffee or tea warm via the induction heater within the base. Using ceramic wireless heating technology, it provides better thermal conductivity, so you can keep beverages at a steady 131F for about eight hours.

Safe to Use

The power shuts off automatically once the mug is removed from its base. Plus, it's waterproof and easy to clean.

Fast Wireless Charging

The built-in charger supports Qi protocols and is compatible with Apple 7.5W fast charging and standard 5W charging.

Quality Construction

Made of temperature-strengthened ceramic, the durable mug and lid preserve heat. Meanwhile, the aluminum alloy base is capable of identifying when smartphones are connected.
